

# Locate your Xeos Beacons at Sea without Internet or Cell service

## HANDHELD IRIDIUM BEACON LOCATOR

With a built-in GPS receiver, the Hermes will display your deployed beacons GPS locations (plus range and bearing) on its LCD screen for quick and easy recovery. The included Iridium antenna can also be exchanged with a remote cabled antenna (sold separately) to enable the reception of messages from inside the bridge.

Iridium location messages from up to 10 Xeos beacons can be received by your handheld Hermes and pushed to shipboard charting systems via NMEA-0183, greatly simplifying the process of locating valuable marine assets for recovery.

You can track and recover your valuable marine assets or monitor for emergency alarm events in near real-time anywhere in the world.

## KEY FEATURES

- Portable handheld
- Daylight readable LCD screen
- Outputs standard NMEA-0183 TLL messages
- Compatible with chart mapping software (OpenCPN)
- Simultaneous tracking of up to 10 beacons
- Global communications
- Full day of operation on a single charge
- Weatherproof enclosure
