

OSKER Quickstart

Read this entire document before taking any action

Before using the OSKER

- Ensure the IMEI of your device is activated through your chosen Iridium provider and intended message recipients are added to its account ahead of deployment.

Power-Up

- Break the magnet from its holster on the side of the OSKER. A **GREEN LED** will flash within 5 seconds of removal via a small window in the top of the unit labelled “On” while the device completes power-up.
- To confirm the device is on after time has passed, tap the magnet to the “On” label, which will illuminate the green LED if the device is powered.

Confirm Transmission

- Turn the device on and place it outside in view of as much of the sky as possible.
- The unit will transmit a power-up message, and transmit one GPS fix every 10 minutes at default settings within 5 minutes of power-up.
- Confirm that these messages are being received by your email and/or XeosOnline.

Operation

- When deploying the unit, power it up by removing the magnet.
- Once the unit is confirmed to be on, it is ready to be deployed.
